DATA COLLECTION:

Ntombi Bakaqana

PURPOSE:

The main purpose of Trends is to serve as a reference source of economic statistics and to present it graphically.

NOTES:

Percentage change (% y-o-y) is based on the same period of a year ago.

The Hodrick-Prescott filter is used to calculate trends.

A time dependant linear regression on the trend is used to extrapolate some trends 4 periods ahead.

Area graphs: the indicators at the bottom of the graph correspond to the left side of the legend, and the top side of the graph correspond to the right side of the legend.

Please refer to the glossary on the BER's [website](#) for explanations of technical terms.

Donald Trump elected as president of the US

Financial markets reacted mostly positively to the election of Donald Trump as the new US president, though the Fed turned more hawkish on inflation prospects.

INTERNATIONAL

During the third quarter of 2024, the **US** economy expanded by 0.8%, up from 0.7% in the second quarter. Growth was mostly driven by investment in equipment, private goods consumption and government consumption. Investment in residential property and structures declined. In nominal annualised terms, the size of the US economy reached \$29.37 trillion in the third quarter. On the political front, Donald Trump was elected to become the next US president on 5 November, after which the dollar strengthened, and stock markets improved. Preliminary indications are that GDP growth accelerated in the fourth quarter, as the *S&P Global US Composite PMI* rose to nearly 57 index points in December, up from 54 in September (a level of 50 indicates a steady state in business activity). However, there was a significant divergence between the services and manufacturing sector, with the latter falling at the steepest pace since the global financial crisis (excluding the COVID-19 period). Regarding prices, annual consumer inflation started to accelerate again, rising from 2.4% in September to 2.7% in November. While the US Federal Reserve (Fed) cut its policy rate by a further 25 basis points (bps) during its December meeting, policymakers now expect interest rates to drop by only 50 bps during 2025, from 100 bps before, amid sustained economic growth and reaccelerating inflation. Following the statement of fewer cuts going forward, stock prices receded initially but recovered again before year end.

GDP growth in the **Eurozone** accelerated from 0.2% in the second quarter to 0.4% in the third, the highest in two years. Among the member countries, growth improved considerably in Germany, from -0.3% in the second quarter to 0.2% in the third. In Spain, growth remained at 0.8%. Meanwhile, the HCOB Eurozone Composite PMI drifted below the neutral-50 level during the fourth quarter, mostly on the back of lower output levels in manufacturing. It was especially the car manufacturers in Germany that suffered cutbacks in production and employment. Input costs accelerated slightly in the services sectors, while those in manufacturing continued to decline moderately. Similar to the US, annual consumer inflation turned higher since September, rising from 1.7% to 2.2% in November, while annual core inflation stabilised at 2.7%. With these figures in mind, in December, the European Central Bank (ECB) lowered its key policy interest rate by 25 bps to 3%. This was the fourth decline in 2024, taking rates down from 4% at the beginning of the year. The ECB now foresees inflation to reach 2.1% in 2025, very close to its target rate.

In **China**, economic growth accelerated slightly from 0.7% in the second quarter to 0.9% in the third quarter. The uptick in growth was partly supported by lower interest rates and other stimulus measures introduced during the third quarter amidst the ongoing property sector challenges. Business activity picked up in the fourth quarter, as indicated by the Caixin China General Manufacturing PMI. The index increased from just below the neutral-50 level in the third quarter to nearly 51 points in the fourth quarter. However, manufacturers were forced to absorb cost increases amidst higher input prices while not being able to raise selling prices equally. In an attempt to provide economic support, the People's Bank of China (PBoC) lowered its key policy rate (the one-year prime rate) during the fourth quarter from 3.35% to 3.1%. Still, the five-year rate, a benchmark for mortgages, was unchanged at 3.6%. Fiscal stimulus was also announced in December, with the government aiming to increase its budget deficit to 4% of GDP, the highest on record.

SOUTH AFRICA

During the third quarter of 2024, a massive contraction of 28.8% in the agricultural sector dragged down overall **real GDP** growth to -0.3% (on a seasonally adjusted basis), from 0.3% during the previous quarter. Excluding agriculture, GDP expanded by 0.4% over the same period. Although the maize crop of 2024 was 23% smaller compared to 2023 (due to lower rainfall), industry analysts are doubtful about the size of the agricultural contraction. Elsewhere, mild growth was recorded in the mining, manufacturing and personal services sectors, with strong growth in the financial sector. A small contraction was recorded in the transport sector. From a demand-side perspective, the contraction in GDP is mostly reflected in the big drawdown on inventories. A large drop in exports was mostly balanced out by a similar drop in imports. Household consumption expenditure expanded by 0.5%, while government consumption declined by 0.5%. Fixed investment was up by 0.3%, mostly on account of government investment in construction works.

On 30 October 2024, Finance Minister Enoch Godongwana tabled the first **Medium Term Budget Policy Statement** (MTBPS) of the new Government of National Unity (GNU). Even though the fiscal metrics looked “worse” than a few months ago, they are still expected to move in the right direction over the next three years. Government debt is now projected to peak at 75.5% to GDP by 2025/26 and then slowly subside to 75% by 2027/28. The Treasury dubbed this MTBPS as a “pro-growth agenda”, which is reflected in their expectations for accelerated economic growth throughout the forecast period. The MTBPS dedicated an entire chapter to infrastructure development reforms, which focus on partnerships with the private sector.

Annual headline consumer **inflation** (CPI) moderated significantly to 2.9% in November, down from 4.4% three months before, primarily due to a sharp decline in transport inflation on the back of lower fuel prices. Other key categories showed notable moderation, including food and non-alcoholic beverages and restaurants & hotels. Core inflation, which excludes volatile food and energy prices, edged down to an annual 3.7%, from 4.1% in August. This suggests that persistent inflationary pressures are easing. However, a renewed risk to food inflation emerged from a 65% surge in the price of white maize from January to November.

On 21 November, the SA Reserve Bank's Monetary Policy Committee (MPC) members unanimously decided to cut the **repo rate** by 25 bps to 7.75%. As in September, the Bank continues to view inflation risks as broadly balanced. On the growth front, the Bank maintained its 2024 GDP growth projection at 1.1% but revised its 2025 forecast upward to 1.8% due to support from lower inflation, rising real incomes, and additional consumer spending driven by two-pot pension withdrawals. The MPC will likely continue to tread carefully going forward, with many of the factors causing uncertainty unlikely to disappear over the near term.

In the fourth quarter of 2024, the RMB/BER **Business Confidence** Index (BCI) rose by 7 index points to 45, implying that 45% of the respondents were satisfied with prevailing business conditions. Underpinning the broad-based improved sentiment was an increase in activity and better business conditions. Encouragingly, business conditions are expected to improve further in the next quarter. In addition, the indices tracking purchasing and selling prices fell, signalling some relief in price pressures. This trend is likely to be welcomed by the Reserve Bank, as it aligns with efforts to stabilise consumer inflation at the 4.5% midpoint of the target range.
